Education

B.Tech, Computer Science Engineering , Vellore Institute of Technology Bhopal
CGPA: 8.34/10

2023 – 2027

Technical Skills

- **AI/ML Frameworks:** LangGraph, LangChain, TensorFlow, Keras, Scikit-learn, NumPy, Pandas
- **Deployment & Infra:** FastAPI, REST APIs, SSE, Git
- **Concepts:** RAG Pipelines, Multi-Agent Systems, Prompt Engineering, Model Optimization, Data Visualisation, Agentic AI
- **Languages:** Python, SQL

Projects

ClarityDoc AI – Multi-Agent Document Intelligence Platform [[GitHub](#)] *April 2026 - July 2026*

FastAPI, React, Vite, Google GenAI SDK (Gemini-2.5-Flash), Pydantic, pypdf, python-docx, Render

- Built an app (FastAPI + React/Vite) deployed on Render as a unified service, achieving sub-200ms API latencies.
- Engineered a multi-agent routing engine (Gemini-2.5-Flash + Pydantic) classifying documents into 4 domains with 98%+ accuracy, routing to tailored agents.
- Built PDF/DOCX/TXT extraction pipelines with a 12,000-char input sampler, cutting LLM token usage by 65%.
- Designed schema-driven extraction with interactive UI (risk indicators, flash-cards, quizzes), reducing time-to-insight by 80%.
- Built a real-time agent thought-execution logger for intent, routing, and LLM call states, improving debugging transparency.

Flight Data ETL Pipeline & REST API [[GitHub](#)]

Jan 2026

Python, Pandas, SQLite

- Designed an end-to-end ETL pipeline ingesting raw aviation delay data (CSV/JSON), cleaning and transforming records with Pandas into a relational database (SQLite/PostgreSQL).
- Built a RESTful API (Node.js/Express) exposing flight data as JSON endpoints, deployed via AWS Lambda + API Gateway with sub-200ms cold-start latency.
- Wrote SQL aggregation queries (avg. delay by route, carrier on-time rates) and documented the pipeline in Markdown.
- Used Git with a branched, PR-based review workflow for version control.

Daily Brief AI – Real-Time Agentic News & Weather Assistant [[GitHub](#)]

Dec 2025 – July 2026

FastAPI, SSE, Groq SDK (Llama-3.1-8b), React, Vite, Google OAuth 2.0, APScheduler

- Built a FastAPI + SSE backend streaming agent logs, tool traces, and briefs, cutting latency to under 250ms.
- Integrated Groq SDK to rewrite weather and news feeds by user interest, improving generation speed by 45%.
- Built an ingestion pipeline over Google News RSS and OpenWeather/Open-Meteo APIs, deduplicating and ranking 50+ articles into a top-20 list in under 1.5s.
- Implemented Google OAuth 2.0 for Gmail access, automating daily brief generation and delivery via APScheduler.
- Built a React + Vite SPA consuming chunked streaming responses for live agent steps, reducing load time by 30%.

Work Experience

Larsen & Toubro (L&T)

Guwahati, Assam

Data Analysis & Management Intern

May 2025 – June 2025

- Contributed to internal data analysis and management initiatives, streamlining data collection, validation, and reporting processes to support informed decision-making.
- Analyzed large volumes of operational and project data to identify trends, inconsistencies, and improvement opportunities, enhancing data accuracy and reliability.
- Collaborated with cross-functional teams to gather requirements.
- Assisted in developing standardized data management protocols, improving consistency and quality across departments.

Achievements

- **Smart India Hackathon 2023:** Top 5 Finalists within competing 225 teams

Certifications

- Bits & Bytes in Computer Networking (Google)
- NPTEL Marketing Analytics (SWAYAM)
- NPTEL Foundations of Machine Learning (SWAYAM)
- Generative AI (Oracle)
